

Transfer **FOREfront**™

Seamless Transfer and Referral Tracking for the Healthcare Enterprise

Central Logic's ForeFront Transfer unites web-based, real-time data tracking with secure telecommunications to significantly improve accuracy and availability of critical information, while measurably reducing resource costs.

Coordinating Transfers, Saving Lives.™

Coordinating inter-facility and community transfers have become a primary focus of healthcare institutions around the country. When managed properly, trauma based patient transfer can result in increased revenue opportunities and/or protect your enterprise from inappropriate transfers. **ForeFront Transfer** has a powerful method for handling transfers while insuring all information is evaluated before a business decision is made to accept the patient.

Track all information related to transfers in one location

ForeFront Transfer is the software that directly addresses all the steps required to coordinate a transfer.

- Simultaneous communication with referring facility and accepting physician
- Instantly share data with transport and emergency department
- Integrated provider/patient database
- Suspend the call while verifying bed availability and insurance coverage
- Automated reminders of open calls needing attention
- Web based so multiple entities can view and edit information
- Information is accurate and changes register immediately
- Pages can be sent to any type of receiving device
- Communication tracking and security
- Customized report generation
- Shared calendars and schedules
